University, 119991 Moscow,
Russia

Dr. Victor V. Mal'tsev

Head of Crystallography&Crystal
Growth Laboratory, Geological
Faculty, Lomonosov Moscow
State University, Moscow, Russia

Message from the Guest Editors

There are numerous structural types of technologically promising inorganic materials, including complex silicates, germanates, phosphates, vanadates, borates, and oxides, which could be obtained in different crystalline forms: from bulk single crystals to low-dimensional structures. A problem which awaits further clarification concerns the nature of phase formation in these complex systems, considering this process from the viewpoint of crystal chemistry.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
