Organofluorine Chemistry

Message from the Guest Editor

Organofluorine chemistry, which represents an expanding field of research in drug design, has generated increasing interest in pharmaceutical research over the past decade. Although fluorinated organic molecules are virtually nonexistent in nature, the number of novel fluorine-containing substances as well as fluorinated drugs is ever increasing. It is expected that fluorinated small-molecular entities (azaheterocycles, functionalized alicycles, amino acids, nucleosides, etc.), as potential bioactive scaffolds or building blocks, will be of high importance in drug research over the coming years. Accordingly, their syntheses and the development of versatile synthetic methods for these types of derivatives have currently become a hot topic in synthetic organic and medicinal chemistry. Among the synthetic protocols towards fluorine-containing derivatives, either through nucleophilic or electrophilic late-stage fluorination or through the application of sophisticated fluorine-containing key elements, the access of various highly functionalized derivatives in view of selectivity, robustness, cost, efficiency, or applicability is still a significant challenge.
Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 12.6 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2018).
