Message from the Guest Editor

Dear Colleagues,

This issue focuses on the identification and use of selected naturally-occurring foodstuffs, and of compounds in these foods, for use in the prevention of cancer. The relative merits of using whole foods versus individual compounds within these foods for cancer prevention are discussed. Where available, the results are presented from both preclinical studies and clinical trials of these foodstuffs and their compounds. These results include toxicity assessments, pharmacokinetic studies of compound bioavailability, and mechanisms of inhibition of both the initiation and promotion/progression stages of cancer development. Future directions for the use of both whole foods and individual compounds for the more effective chemoprevention of specific cancer types are discussed.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
