Message from the Guest Editors

Dear Colleagues,

In the current far more dynamic view, the cellular functions of both DNA and RNA rely not only on their sequences but also, and above all, on their tertiary structures, which are diverse (two-, three-, four-stranded architectures), dynamic (moulded by chaperone proteins, unfolded by resolving enzymes), and involved in intricate cellular regulation networks (with a remarkably broad spectrum of biological processes, from gene expression to genome maintenance). In this Special Issue, we wish to provide a snapshot of the current state of the field, focusing on the structural characterization of DNA, RNA, and DNA/RNA non-canonical structures (e.g., G-quadruplexes, i-motifs, three-way DNA junctions), novel methodologies to assess their existence and functional relevance in human cells (e.g., next generation sequencing, optical detection methods), as well as the strategies implemented to gain control over the key cellular events controlled by the non-canonical nucleic acid structures using ever more accurate and versatile molecular tools.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 12.6 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2018).
