closed (30 September 2017)

Message from the Guest Editors

Dear Colleagues,

The special Issue “Biomedical Applications of Polylactide (PLA) and its Copolymers” will be focused on current experimental research on the use of PLA, blended or functionalized with other biopolymers, for potential biomedical applications such as in the production of cell or drug delivery systems, applicable in controlled and/or targeted drug release, and in the fabrication of bioresorbable scaffolds for tissue engineering in regenerative medicine. Currently, PLA is already approved by the Food and Drug Administration (FDA) as a component in a wide range of biomedical and pharmaceutical products. This favorable approval arises from its excellent properties, such as biocompatibility, biodegradability and tunable mechanical and physicochemical properties, whereby it can be appropriately processed and engineered to allow a desired biomedical application.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
