Peptide and Peptidomimetic: Synthesis, Purification and Characterization

Message from the Guest Editors

This Special Issue is dedicated to compiling contributions that showcase significant outcomes in the synthesis, purification and characterization of peptides and peptidomimetics. Possible applications span chemical synthesis, analytical chemistry and material science. We also encourage discussions on inventive green approaches to established peptide and peptidomimetic synthesis, purification and characterization techniques.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 30th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.
