Special Issue

Food Traceability and Authenticity within Analytical Chemistry

Message from the Guest Editor

With the rise of globalization and complex distribution systems, there has been an increase in food product counterfeiting. Food adulteration, which is mostly economically motivated, can have serious impacts and even detrimental consequences on the health of its consumers. The international community uses a collective approach to cope with food fraud in which all stakeholders in the food supply chain are certified and qualified (excluding those who do not meet the applicable standards), and foods are monitored in realtime. However, there is a need for a plan of action that takes the perspectives of the food industry and consumers into account. Available technologies for the detection of food fraud are mainly based on profiling and fingerprinting methods. In this section, we deal with future research areas, not only related to food adulterers but also to food safety and climate change, and the need to develop interdisciplinary approaches to contemporary problems.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 29th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt

Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
