

Special Issue

Supramolecular Gel II

Message from the Guest Editors

Supramolecular gels represent one of the new frontiers of materials chemistry. Built by the feeble and cooperative supramolecular interactions occurring among low molecular weight compounds (gelators), they are featured in 3D networks which are able to immobilize solvents through the occurrence of capillary forces.

Their classification is solvent-based and together with more common organo- and hydrogels; more recently, ionogels have also attracted research attention. In all cases, the gel texture proves more porous with respect to polymeric gels. Furthermore, they are frequently able to be restored after the action of external stimuli. These abilities have significantly favored their application, and they are currently applied in different fields, such as pharmaceutical, environmental, synthetic fields, etc.

The issue is aimed at collecting contributions on studies on the obtaining of gel phases and their characterization, in the attempt to better clarify the relationship between gelator, solvent nature, and gel phase formation. On the other hand, investigations of the plethora of supramolecular gels applications will also be taken into account.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt

Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
