Special Issue

Advanced Nano-Based Chemsensors and Biosensors for Detective Application

Message from the Guest Editors

The quantitative detection of various analytes exhibits an increasing tendency toward broader application. The sensing techniques covered mostly optical and electrochemical transducers. The transducing options can function together with suitable nanomaterials to improve analytical performances, including metallic and metal oxides, carbon-based materials, metal-organic frameworks, carbon dots, nanocrystals, and photon up-converting particles. Usually, these nanomaterials can be used as supporters for the efficient immobilization of biomolecules, reporters for signal output, and modifiers for improving the surface area and enhancing the conductivity of the sensing interface. Contributions to this Special Issue should cover advances in nano-based chemosensors and biosensors for detective applications, such as electrochemistry, fluorescence, colourimetry, surface plasmon resonance and so on. The analytes include metal ions, nucleic acids, proteins, enzymes, viruses and small molecules.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt
Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
