

## Special Issue

# Combined Quantum Mechanical and Molecular Mechanical Methods and Simulations

### Message from the Guest Editors

Combined quantum-mechanics/molecular-mechanics (QM/MM) is an important component of many methods for in multi-scale modelling and simulations. The algorithms involve partitioning an entire system into a small subsystem of primary interest, which is modeled by an accurate QM level of theory, and the surroundings that interact with it, which are treated by MM force fields for computational efficiency. The surroundings may include the less active part of a large molecule, the solvent, all or part of a protein, or more than one of these—or other possibilities. The integration of QM and MM methods makes it affordable to realistically describe reactions in complex environments. QM/MM has found applications in many research fields such as enzymatic reactions and other catalytic reactions, ion solvation and transport, photochemistry, nanostructured materials, etc. This Special Issue of *Molecules*, “Combined Quantum Mechanical and Molecular Mechanical Methods and Simulations,” presents both recent developments and applications in this exciting field.

## About the Journal

### Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 29th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.

---

### Editor-in-Chief

Prof. Dr. Thomas J. Schmidt

Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarInLit, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
