Biomolecules of Natural Origin: Fundamentals and Applications

Message from the Guest Editor

Special Issue is focusing on the structure–function relationships of various biomolecules of natural origin (i.e. obtained from blood and milk; natural products; feeding compounds, food and beverages, etc.); analytical methodologies for biomolecule analysis; biomolecules applications in chemistry, biology, human and animal medicine, agriculture and animal husbandry.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 29th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.
