Drug Analysis in Pharmaceutical Development and Drug Manufacturing

Message from the Guest Editor

Drug analysis includes aspects of drugs identification and quantitative analysis, characterizing their molecular structures, crystalline/amorphous phases, size, shape, and orientation of the particles, assessing their affinity, specificity, solubility and stability, testing their efficiency in vitro and in vivo and also current control during drug manufacturing.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 29th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.
