Special Issue

Direct (Hetero)Arylation: A New Tool for Organic Electronics

Message from the Guest Editor

Direct (hetero)arylation is a novel and powerful tool for the synthesis of cheap and efficient polymeric and oligomeric semiconductors. Indeed, this innovative method allows the formation of carbon-carbon bonds between arenes and arvl halides, which do not require organometallic intermediates thereby significantly reducing both synthetic steps and cost. Highlypromising studies have been reported in the last five years, but it is the purpose of this Special Issue to show how conjugated polymers and small molecules prepared from direct (hetero)arylation can be utilized in different devices (light-emitting diodes, transistors, solar cells, electrochemical cells, sensors, etc.). This Special Issue will contain different formats of contributions (original research, reviews, communications and letters), discussing aspects broadly indicated by the keywords.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt

Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
