Special Issue

Antibacterial and Physical Properties of Smart Materials with Novel pH-Sensitive Compounds

Message from the Guest Editor

In recent decades, the use of antibiotics has taken a significant step toward preventing the propagation of bacterial pathogens. However, the rise of multidrug-resistant bacteria poses a new challenge that contributes to higher treatment failure. Progress has been made toward alternative therapeutics toward bacterial infections, including a number of pH-responsive compounds that have the ability to provide targeted and controlled antibacterial activity. Smart materials with antimicrobial efficacy are especially advantageous as they generate local stimuli-responsive antibacterial activity. Such materials may be a new approach to treat bacterial infection locally with reduced amounts of antibacterial agents, thus enhancing antibacterial stewardship and alleviating the risk of antibacterial resistance. In addition to the enhanced antimicrobial properties of these novel compounds, it is important to consider their physical impacts on the materials they are carried or used with as well. They need to be used without compromising the basic physicomechanical characteristics of materials.

About the Journal

Message from the Editor-in-Chief

As the premier open access journal dedicated to molecular chemistry, now in its 29th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts, and novel materials. Pushing the boundaries of the discipline, we invite papers on all major fields of molecular chemistry and multidisciplinary topics bridging chemistry with biology, physics, and materials science, as well as timely reviews and topical issues on cutting-edge fields in all of these areas.

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt
Institute of Pharmaceutical Biology and Phytochemistry, University of Münster, Corrensstrasse 48, D-48149 Münster, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
