Message from the Guest Editors

Dear Colleagues,

User experience (UX) design is essential when creating products and concepts that are both pleasurable and useful. User experience designs can target to a special emotion, value, or experience and by doing so, increase the success of novel systems. This Special Issue addresses the encountered challenges as well as concepts and methods that can be used when conducting research on UX design for exploratory systems. Exploratory systems can include, e.g., futuristic, visionary interactive systems; going beyond the conventional input–output methods and form factors; and systems that reach out from the traditional use cases for interactive technology.
