Deadline for manuscript submissions:
closed (30 April 2019)

Message from the Guest Editor

Embodied and spatial interaction has gained a lot of attention lately, but there is little research carried out from multimodal interaction perspective. In this special issue, we welcome submissions related to embodied and spatial interaction, which cover any combination of multimodal interaction means. Articles could relate to design, implementation and evaluation of multimodal solutions. In particular, we welcome articles which focus on fusion and fission of different modalities, including multi-dimensional analysis of multimodal interaction (e.g., combinations of subjective and objective metrics) in this setting. Other possible topics include case studies (e.g., system descriptions and evaluation results) of multimodal embodied and spatial systems, multimodal interaction techniques for embodied and spatial interaction (e.g., combination of gestural and spoken interaction), and domain-specific case studies (e.g., embodied and spatial interaction in industrial settings and healthcare).

Message from the Editor-in-Chief

Towards the end of 2018, I was approached to be the new Editor-in-Chief for the *Multimodal Technologies and Interaction* (*MTI*) journal. I was honored to be considered and happily accepted the role, starting in January 2019.

MTI is a new journal, and since starting in 2017, has published 10 issues with over 140 papers, with the number of publications continuing to grow. As Editor-in-Chief, I would like to continue increasing the number of high-quality papers that we publish, and in addition, work towards improving the journal in other ways, such as getting the journal listed on ISI, establishing an impact factor, and increasing our social media presence.

I would also like to better engage with the research community, including bringing some new members onto the Editorial Board, focusing the journal on the latest areas of interest, marketing at leading conferences and, most importantly, getting feedback from our readers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, dblp Computer Science Bibliography, and other databases.
Journal Rank: JCR - Q2 (Computer Science, Cybernetics) / CiteScore - Q2 (Neuroscience (miscellaneous))
