Message from the Guest Editors

Considering that muscle diseases represent a comorbid conditions associated with a multitude of genetic and acquired pathologies, clear evidence shows that maintaining muscle health plays a fundamental role in the prevention of the appearance and in controlling the progression of various diseases, and it has a great impact on society in terms of the overall health and well-being of all people and consequently on the public health service of the various countries in terms of economic savings. For these reasons many research projects are still in progress.

This Special Issue invites submission of manuscripts on describing recent advances in scientific research on the study of muscle physio-pathology in Italy, with a multidisciplinary approach that takes into consideration all aspects of research such as muscle anatomy; muscle biochemistry; muscle biology; muscle immunology; muscle pathology; muscle pharma-cology; muscle physiology; and muscle toxicology etc.

Studies on both humans and animal models will be considered. We welcome different types of manuscript submissions, including original research articles and updated reviews (systematic reviews and meta-analyses).
