Electronics, Beijing Institute of
Technology, Beijing 100081,
China

Deadline for manuscript
submissions:

closed (11 April 2025)

Message from the Guest Editors

Dear Colleagues,

With the miniaturization of semiconductor devices reaching the physical limit, Moore's law is facing a development bottleneck. With their unique advantages, two-dimensional materials are expected to solve the performance bottleneck of chips. Two-dimensional materials also exhibit novel quantum properties related to the topology, strong correlation, charge density wave, and superconductivity. Two-dimensional materials have become an excellent tool for the research of condensed matter physics and material science.

Within the scope mentioned above, this Special Issue intends to publish a series of scientific advances that reveal the up-to-date theoretical and experimental achievements in the electrical, magnetic, and optical properties of two-dimensional nanomaterials and heterostructures and the related optoelectronic, magneto-electronic devices. Original research articles, as well as reviews, in the growing field of two-dimensional nanomaterials are welcomed.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
