Nanocellulose: Recent Advances to Unlock Potential for Engineered Sustainable Materials

Guest Editors:

Prof. Dr. Carlos Negro

Department of Chemical Engineering and Materials, Universidad Complutense de Madrid, 28040 Madrid, Spain

Dr. Marc Delgado-Aguilar

LEPAMAP Group, Department of Chemical Engineering, University of Girona, 17071 Girona, Spain

Prof. Dr. María Evangelina Vallejos

IMAM, UNaM, CONICET, FCEQYN, Programa de Celulosa y Papel (PROCyP), Posadas, Misiones, Argentina

Deadline for manuscript submissions:

closed (31 January 2024)

Message from the Guest Editors

Dear Colleagues,

Nanocellulose is opening new horizons as a source of renewable nanostructures thanks to its wide availability and sustainability in myriad applications. The main scope of this special issue is to compile the most recent research on cutting-edge developments and uses of nanocellulose. The contribution will particularly focus on current scientific and technological progress in the production, characterization, and applications, including lab-scale studies and new developments in pilot and full industrial-scale applications. The special issue will contribute to the accelerating R&D and industrialization of nanocellulose. Researchers from universities, public/private R&D institutes, and industry, are invited to send their contributions.

Contributions to these areas are welcome:

- New and state-of-the-art methods for characterization
- Production methods
- Improving the performance of nanocellulosic materials
- Advances on the Use and Applications of nanocellulosic materials
- Emerging fields on nanocellulosic materials
- Other related topics

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
