Deadline for manuscript  
submissions:

**closed (25 February 2021)**

### **Message from the Guest Editor**

Dear Colleagues,

Nanoimprinting and nanoimprint lithography have evolved tremendously since their beginnings in the mid-1990's, and have had an impact on a wide application field, ranging from optics to life sciences, from organic electronics to photovoltaics.

The nanoimprint processes can be based on light-curing materials, thermally curing materials, thermoplastic materials or can be material transfer processes like, for example, microcontact printing processes. Nanoimprint materials range from classical resists for pattern transfer processes like reactive ion etching, to permanent materials for optical or biological applications. Along with the different processes and material requirements come different stamp concepts and stamp materials.

This Special Issue will attempt to cover the most recent advances and the state-of-the-art in the field of nanoimprinting and nanoimprint lithography as far as the processes, tools, materials, and applications are concerned. Contributions ranging from basic research to industrial applications will be considered. Papers dealing with applications addressing societal challenges like climate change are highly welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
