

Special Issue

Advances in Nanobiosystems for Complex Diseases

Message from the Guest Editor

Complex diseases are pathological processes triggered by a combination of different factors and are considered the most challenging diseases to treat. Therefore, complex diseases or pathological processes require special efforts when it comes to developing efficient therapies. Nonetheless, recent developments in nanotechnology provide encouraging opportunities to design smart strategies for the visualization, diagnosis, or treatment of complex diseases. This Special Issue will focus on the development of drug delivery systems designed to overcome biological barriers, increase drug efficiency, reduce side effects, improve combined therapy, or enable multitargeting strategies. Therefore, authors working on new therapeutic formulations to treat complex diseases are welcome to submit their contributions to this Special Issue entitled “Advances in Nanobiosystems for Complex Diseases”. We are especially interested in drug delivery systems that mimic structural and functional aspects of naturally occurring biological assemblies and wish to showcase the most recent papers related to this innovative field.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
