

Special Issue

New Strategies for Anticancer and Antimicrobial Studies Based on Emerging Nanomaterials

Message from the Guest Editor

The present Special Issue aims to present new strategies for developing nanostructure-based formulations to enhance their therapeutic use, minimize the instrumental analysis cost for various types of cancers (chemotherapy, radiotherapy, immunotherapy, surgery, etc.), and aid in their applications as antimicrobial agents. We aim to encompass a variety of nanostructure material applications in all areas of science (chemistry, physics, biology, medicine, engineering, agriculture, etc.), including the use of quantum dots, nanoparticles, and a range of nanostructures to control various types of cancer, microbes, infectious diseases, drug delivery, and DNA binding, as well as the application of physical, chemical, and biochemical sensors.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of
Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General
Chemical Engineering)
