New Trends of Nanofluidics and Nanofluids

Message from the Guest Editor

Nanofluidics is the study and manipulation of fluids confined to nanometer-sized structures. Nanofluids are a class of new engineered fluids that contain nanometer-sized (metallic or non-metallic) particles. Both nanofluids and nanofluidics have been emerging research topics that have attracted plenty of researchers recently. Nanofluidic devices have potential applications in DNA sequencing, epigenetic analysis, gene therapy, drug delivery, and toxicity analysis. Nanofluids have been found to possess enhanced thermo-physical properties, such as thermal diffusivity, thermal conductivity, and viscosity, compared with those of conventional fluids. As a result of this significance and the potential applications of nanofluidics and nanofluids, this Special Issue is focused on “New Trends of Nanofluidics and Nanofluids” in the *Nanomaterials* journal to cover recent developments and applications. For further reading, please follow the link to the Special Issue Website at: <http://www.mdpi.com/si/74001>

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of
Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General
Chemical Engineering)
