

Special Issue

Advanced Nanomaterials in Flexible and Stretchable Electronic/Optoelectronic Devices

Message from the Guest Editors

Nanomaterials are materials with one or more dimensions falling into the nanometer scale. The dramatic size shrinkage renders them new electronic, magnetic, optical and thermoelectric properties. As modern society gradually steps into the intelligent age, nanomaterials will have broad application potential in a flexible display, electronic skin, wearable electronics, artificial nervous systems, human-machine interactions, etc. This Special Issue will show the latest research progresses and challenges of nanomaterials developed for flexible and stretchable electronic/optoelectronic devices from the perspective of the material syntheses, device structures and applications. We encourage submissions on synthesis and design of functional nanomaterials (such as colloidal CdSe or InP QDs, perovskite QDs, etc.), and study of device engineering and device physics. In addition, applications of advanced nanomaterials in light emitting diodes, photodetectors, flexible batteries and wearable sensors are welcome.

Guest Editors

Prof. Dr. Shuming Chen

Dr. Peili Gao

Dr. Heng Zhang

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of
Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General
Chemical Engineering)
