

Special Issue

Doping in Systems Derived by Chemical or Physical Deposition Techniques for Environmental and Energy Application

Message from the Guest Editors

This special issue focuses at doping related phenomena in nanomaterials, whereby the aspects of functionality for environmental and energy application were identified as those that recently raise special attention of the scientific community. Novel systems and setups, modifications of the compositions and depositions using chemical and physical methods point out to the importance of novelties from the areas of materials design, synthesis procedures and deposition techniques. In addition, equally important are the novelties from the area of characterisations that are critical for understanding of materials compatibility, i.e. monitoring interfacing issues of composites based on doped nanomaterials.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
