

## Special Issue

# Functional Glyconanomaterials

### Message from the Guest Editors

Nanotechnology provides a new array of techniques and platforms to study glycosystems. Recent developments in the field have provided access to an advanced toolkit of synthetic nanomaterials and improved techniques to study such molecules at high resolution. Current advances in glycobiology research have demonstrated that glycosylated biomacromolecules play crucial roles in a wide range of important biological functions. Thus, the development of glycofunctionalized materials emulating or interfering in those processes, such as glycocarrier systems or glycoconjugate drugs, offer great potential for applications in a broad range of fields. The chemical diversity of carbohydrates can be exploited for the development of new materials with controlled and precise chemical, physical, and biological properties. This Special Issue invites research articles involving the design, fabrication, and utilization of glyconanomaterials for biomedical applications.

## About the Journal

### Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
