Special Issue

Eco-Friendly Microdevice Printing Techniques with Functional Nano/Biomaterials

Message from the Guest Editors

The Special Issue is now open for submission of contributions with focus on the synthesis and characterization of nanostructured materials obtained by sustainable deposition processes, such as additive manufacturing and drop-on-demand printing. The functional nanomaterials should exhibit special optical, electronic, thermal, and/or magnetic properties, with an emphasis on physical and chemical functionality for biological and medical applications. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but not limited to) the following: inkjet printing, plasma processing of cells and nanomaterials, atomic layer deposition, electrochromic and thermochromic materials, micro/nanofluidic systems, self-assembled nanostructures, nanocomposites, and flexible electronics. The contributions are expected to explore correlations between morphology and functional properties of the printed nanostructures, and to anticipate new research lines covering the areas of nanomaterials and biotechnology within the framework of green methods of synthesis.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones
School of Geography, Earth and Environmental Science, University of Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
