

Special Issue

Nanomaterials in CO₂ Capture

Message from the Guest Editors

Decarbonizing the global energy supply is a central challenge if the world is to achieve significant CO₂ emission reductions necessary to avoid the dangers of climate change. Carbon capture and sequestration (CCS) has been entrusted with about 20% of the reduction in anthropogenic CO₂ emission. CO₂ capture is essential for CCS, however, most of the current capture technologies are still on their way to commercialization. Nano-scale tuning of sorbent materials has been regarded as an approachable way to enhance the efficiency and cost effectiveness of CO₂ capture processes. The topics that would be covered in this Special Issue include, but are not limited to, nanomaterials (e.g., Calcium based; Magnesium based; Alkali zirconate; Alkali silicate; Hydrotalcite; MOFs; Carbon materials; Solid amine-based; Graphite/graphene-based; Zeolite-based; Silica-based; Polymer-based; Alkali metal carbonate-based; waste derived). Articles focusing on the environmental aspects related to nanomaterials, carbon capture or life cycle analysis will also be welcome.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
