

Special Issue

Nanomaterials Engineering by Green Techniques: Concepts and Applications

Message from the Guest Editor

Nanomaterials are widely used as functional elements on surfaces and nano-hybrid systems for various technological applications, requiring specific morphology and surface chemistry. The development of synthesis methods reliably scaled up to industrial production levels is now the target required to expand nanomaterials applicative prospects. Among green techniques, liquid pulsed laser ablation has demonstrated its versatility as a scalable method while laser melting in liquid promote high purity alloys formation. The goal of this Special Issue is to collect relevant contributions from experts in nanomaterials production to discuss recent developments of green techniques.

Topics of this Issue cover a wide range of R&D fields:

- * Green techniques fundamental aspects and nanoparticles properties;
- * High throughput laser-generated nanoparticles synthesis and laser materials processing;
- * Nanomaterials sensing, energetic, SERS and NLO applications.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
