Hydrothermal Synthesis and Application of Nanomaterials

Message from the Guest Editor

There are numerous ways to make nanomaterials, and hydrothermal synthesis is one example. Hydrothermal synthesis is emerging as a very valuable and flexible platform technology from which multiple classes of materials can be manufactured, including metals, oxides, sulfides, carbonates, oxyhydroxides, hydroxides, and even metal–organic frameworks.

The format of welcomed articles includes full papers, communications, and reviews. Potential topics include, but are not limited to:

- Nanomaterials development, synthesis, and fabrication for a specific application.
- Nanoparticles functionalization—where downstream functionalization is carried out on nanomaterials, either inline or offline, to make them usable in an application.
- Innovative nanomaterials, nanocomposites, and nanohybrids for specific applications, all derived from hydrothermal synthesis.
- The scale-up of hydrothermal synthesis from bench scale and beyond.
- Sustainability assessment of the materials from the hydrothermal synthesis, either in their whole life cycle or just in their manufacture, relative to materials from other routes.

About the Journal

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Editor-in-Chief

Prof. Dr. Eugenia Valsami-Jones

School of Geography, Earth and Environmental Science, University of
Birmingham, Birmingham B15 2TT, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General
Chemical Engineering)
