

## Special Issue

# Nanoparticle-Macrophage Interactions: Implications for Nanosafety and Nanomedicine

### Message from the Guest Editors

Dear colleagues, Nanoparticles (NPs) offer unique physicochemical properties useful for biomedical applications. Once in the body, NPs are recognized by the immune system. The mechanisms implicated in the uptake of NPs by macrophages that are a major class of phagocytic innate immune cells determine the lifetime of NPs, which has consequences for their nanosafety and biomedical applications. Various strategies have been applied to manipulate the recognition of NPs by monocytes/macrophages and thus, their immunotoxicological properties. NPs have been also designed to target macrophages with the aim to trigger or to inhibit immune responses, for example, killing or reprogramming the tumor associated macrophages. The aim of the current Special Issue is to cover recent advancements in our understanding of NP-macrophage interactions using in vitro, in vivo, and in silico approaches, novel strategies to control the toxicological and immunological profile of NPs, and innovative ways to modulate the delivery of NPs towards macrophages for safety and medical purposes.

## About the Journal

### Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General  
Chemical Engineering)
