

## Special Issue

# Soft Nanocomposites in Electronic and Optical Devices

### Message from the Guest Editor

The ability to controllably combine conventional hard nanoscale materials with a soft host phase opens up an enormous range of possibilities for innovation in electronic and optical materials and devices. In recent years, there has been a surge of interest in developing polymer and liquid crystal nanocomposites that incorporate the functionality of included nanoparticles into a complex fluid base material such that the composite is amenable to device manufacture in a variety of geometries. To achieve the necessary spatial control of nanoparticles for use in devices, researchers must gain expertise in particle dispersion and controlled assembly in complex solvents. This has largely been achieved by novel approaches to ligand design and the development of advanced assembly methods, focusing in detail on the nanoscale interactions between surface-modified particles and the host phase. In this Special Issue, suitable topics include fundamental ligand design and synthesis, nanoparticle/host phase interactions, defect and phase transition-based assembly methods, mesoscale structural assembly and device design and evaluation.

## About the Journal

### Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal–organic frameworks, membranes, nano–alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access. We are proud of our increasing impact factor and ability to provide rapid decisions to authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Physics, Applied) / CiteScore - Q1 (General Chemical Engineering)
