submissions:

closed (1 December 2018)

Message from the Guest Editor

Brain tumors, as other cancers, are complex genetic diseases involving expressional abnormalities of both protein-coding and non-coding genes. Considering that protein-coding genes constitute only small fraction of human genome, researchers increasingly switched their focus toward non-protein-coding transcriptome that may provide vast panoply of targets for anti-cancer therapy.

In fact, Non-coding RNA (ncRNA) is much more than the mundane messenger between DNA and the protein—it springs up into multiple species (including long non-coding RNAs (lncRNAs), microRNAs or circular RNAs (circRNAs)). Differences between cells during normal development and pathogenesis are in many cases due to differences in when, where and how genes are turned on or off.

It is believed that ncRNAs play enormous role in these processes by facilitating or impeding transcription, translation and activity of protein-coding genes and their products.

We invite experts in the field of brain tumor to present their point of view on various aspects of ncRNA function, regulation and therapeutic advances.

non-coding RNA

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. George A. Calin

Department of Experimental Therapeutics, Unit 1950, The University of Texas MD Anderson Cancer Center, P.O. Box 301429, Houston, Texas 77230-1429, USA

Message from the Editor-in-Chief

This field finally has a dedicated journal where its broad community can communicate and exchange its latest findings in one centralized place. This field was built stone by stone from the many scientific contributions from extremely diverse horizons, studying gene silencing in plants, position effect variegation in drosophila or quelling in fungi. This field has achieved maturity, but a lot remains to be discovered! Our aim is to publish manuscripts from all horizons that will have a high impact on the development of the field. Let's have fun and wish *Non-Coding RNA* a long and rewarding life!

Author Benefits

Open Access - free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in **BIOSIS Previews** (Web of Science) and **Scopus**. Citations available in **PubMed**, full-text archived in **PubMed Central**.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the first half of 2019).
