Deadline for manuscript submissions:  
closed (21 September 2018)

Message from the Guest Editors

Non-coding RNAs (ncRNAs) are key regulators in anti-viral responses and play diverse roles in various aspects of infection, including virus replication, persistence, and pathogenesis. In addition to host ncRNAs that are influenced and/or utilized during infection, both DNA and RNA viruses produce regulatory ncRNAs. These molecules can act to modulate gene expression or control RNA stability or epigenetic processes. Ongoing questions include how viral ncRNAs contribute to immune evasion, whether ncRNAs act as virulence factors, how viruses hijack host ncRNAs, and how both viral and host ncRNAs coordinate to benefit virus replication.

This issue will group together works on the latest advances in ncRNA studies related to virus infections in humans and animal model systems. The following topics will be considered:

- ncRNAs as regulators of cell signaling and anti-viral responses
- novel functions of viral or host ncRNAs in virus replication
- ncRNAs in viral pathogenesis
- pre-clinical and clinical studies on the roles of ncRNAs in viral diseases

Message from the Editor-in-Chief

This field finally has a dedicated journal where its broad community can communicate and exchange its latest findings in one centralized place. This field was built stone by stone from the many scientific contributions from extremely diverse horizons, studying gene silencing in plants, position effect variegation in drosophila or quelling in fungi. This field has achieved maturity, but a lot remains to be discovered! Our aim is to publish manuscripts from all horizons that will have a high impact on the development of the field. Let’s have fun and wish Non-Coding RNA a long and rewarding life!

Author Benefits

Open Access - free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in BIOSIS Previews (Web of Science) and Scopus. Citations available in PubMed, full-text archived in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the first half of 2019).
