

Special Issue

Roles of Non-coding RNAs in Drug Metabolism and Disposition

Message from the Guest Editors

Drug metabolism and disposition are biological processes that occur after drugs are administered into the body, including absorption, distribution, metabolism, and excretion (ADME), which have direct impacts on the therapeutic efficacy and toxicity of drugs. Drug-metabolizing enzymes and transporters are major key players in determining the features of ADME of small chemical drugs, which are tightly regulated by various key regulatory factors, including non-coding RNAs (ncRNAs). Accumulated evidence has shown that microRNAs (miRNAs) and long non-coding RNAs (lncRNAs) participate in regulatory events at various levels of transcription, post-transcription, and translation to control expression of drug-metabolizing enzymes and transporters at the key drug-processing organs, such as the liver, intestine, and kidneys. This Special Issue aims to publish a set of research and review articles focusing on the emerging knowledge of the roles of ncRNAs in drug metabolism and disposition.

About the Journal

Message from the Editor-in-Chief

This field finally has a dedicated journal where its broad community can communicate and exchange its latest findings in one centralized place. This field was built stone by stone from the many scientific contributions from extremely diverse horizons, studying gene silencing in plants, position effect variegation in *Drosophila* or quelling in fungi. This field has achieved maturity, but a lot remains to be discovered! Our aim is to publish manuscripts from all horizons that will have a high impact on the development of the field. Let's have fun and wish *Non-Coding RNA* a long and rewarding life!

Editor-in-Chief

Prof. Dr. George A. Calin

Department of Translational Molecular Pathology, Center for RNA Interference and Non-Coding RNAs, University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q1 (Genetics)
