

## Special Issue

# Non-Coding RNA and Tumor Cell Motility

### Message from the Guest Editor

Cell migration is a key characteristic of many cell types and can be a crucial feature during developmental morphogenesis, tissue repair, wound healing, and regeneration. In addition to being involved in normal cellular behavior, cell migration can also be a malignant cell feature in certain types of pathogenesis, such as tumor metastasis. With this Special Issue on non-coding RNA (ncRNA) and cell migration, we would like to unravel the role played by ncRNA types during cellular migration, both in malignant stages and in wild types. Prof. Dr. Suresh K Alahari

## About the Journal

### Message from the Editor-in-Chief

This field finally has a dedicated journal where its broad community can communicate and exchange its latest findings in one centralized place. This field was built stone by stone from the many scientific contributions from extremely diverse horizons, studying gene silencing in plants, position effect variegation in *drosophila* or quelling in fungi. This field has achieved maturity, but a lot remains to be discovered! Our aim is to publish manuscripts from all horizons that will have a high impact on the development of the field. Let's have fun and wish *Non-Coding RNA* a long and rewarding life!

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q1 (Genetics)
