

Special Issue

Non-Coding RNAs: Variations and Disease

Message from the Guest Editors

The majority of the transcriptome in higher eukaryotes is not translated into functional proteins. Thus, non-coding RNA now holds a major regulatory role in shaping the phenotypic complexity. This Special Issue is focused on, but not limited to, the variations in expression, post-transcriptional modifications, structure, etc., of different classes of non-coding RNAs and their possible role in health and disease. Both reviews and original research articles are welcome. For further reading, please visit the [Special Issue website](#). Best regards,

Guest Editors

Dr. Gianpiero Di Leva

School of Pharmacy and Bioengineering, Guy Hilton Research Facility, Keele University, Keele, Staffordshire ST5 5BG, UK

Dr. Arijit Mukhopadhyay

About the Journal

Message from the Editor-in-Chief

This field finally has a dedicated journal where its broad community can communicate and exchange its latest findings in one centralized place. This field was built stone by stone from the many scientific contributions from extremely diverse horizons, studying gene silencing in plants, position effect variegation in *Drosophila* or quelling in fungi. This field has achieved maturity, but a lot remains to be discovered! Our aim is to publish manuscripts from all horizons that will have a high impact on the development of the field. Let's have fun and wish *Non-Coding RNA* a long and rewarding life!

Editor-in-Chief

Prof. Dr. George A. Calin

Department of Translational Molecular Pathology, Center for RNA Interference and Non-Coding RNAs, University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q1 (Genetics)
