**Prof. Dr. Francesco Palmieri**

Department of Computer  
Science, University of Salerno, Via  
Giovanni Paolo II 132, I-84084  
Fisciano, SA, Italy

fpalmieri@unisa.it

Deadline for manuscript  
submissions:

**31 December 2021**

### Message from the Guest Editors

The pervasiveness of IoT technologies in a variety of fields is changing our lives. Industry, agriculture, health, and even personal life are experiencing a revolution in the way data are collected, communicated, processed, and stored. In recent years, two other technologies have begun to be used in synergy with IoT: Blockchain, which has changed the way data are stored, and machine learning, which has changed the way data are processed. With these premises in mind, it is desirable for researchers to focus their attention not just on the performance and features of the new systems but also on the new security and privacy issues related to this revolution. This Special Issue invites researchers to contribute with original contributions, case studies, and reviews that address all new challenges due to the use of IoT in synergy with blockchain systems and/or machine learning techniques.

Manuscripts can be submitted until the deadline, on 31 December 2021, **but accepted papers will be published continuously in the journal (as soon as accepted) and will be listed together on the special issue website.** You can submit your paper at any time before this date.
