

## Special Issue

# Transplantation of Glial Cells to Repair Injuries and Diseases of the Nervous System

### Message from the Guest Editors

The transplantation of glial cells to repair injuries and diseases of the nervous system is a growing field, and many promising outcomes have been demonstrated in various injury models. For example, various types of glial cells have been tested in pre-clinical and clinical trials to repair spinal cord injury, peripheral nerve injury including optic nerve and brachial plexus injuries, and brain injury, and to treat demyelinating diseases and neurodegeneration.

This Special Issue seeks original research articles and reviews that address the latest approaches used for glial cell transplantation. Topics can include, but are not limited to, glial cell transplantation that involves new cell-preparation technologies; methods to improve cell survival after transplantation; timing and method of transplantation; and motor, sensory and autonomic tests to determine functional outcomes. By gathering these submissions into one Special Issue, we aim to promote new ideas that can be adopted by others to improve outcomes for a range of neural therapies.

## About the Journal

### Message from the Editor-in-Chief

*Neuroglia* covers the critically important functions of the diverse range of cells within the nervous system that are collectively called glia. Our journal focuses on the development, function, and pathology of glia in the central and peripheral nervous systems, as well as how these cells can be used therapeutically to repair injuries and diseases of the nervous system. The journal welcomes research using the latest in vitro and in vivo animal and human research, with a view to its translation into potential human therapies.

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.5 days after submission; acceptance to publication is undertaken in 4.7 days (median values for papers published in this journal in the first half of 2025).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
