Special Issue

Mitochondria in Neurodegenerative Disease: Mechanisms and Therapeutic Targets

Message from the Guest Editors

This Special Issue aims to provide a focused platform for original research and comprehensive reviews that investigate the role of mitochondrial dysfunction in neurodegeneration. We welcome submissions exploring molecular mechanisms underlying mitochondrial impairment, including oxidative stress, mitochondrial DNA damage, impaired bioenergetics, and altered mitochondrial trafficking in neurons and glial cells. Additionally, we encourage studies addressing how mitochondrial dysfunction intersects with protein aggregation, neuroinflammation, and aging. Another key focus of this Special Issue is the exploration of mitochondria-targeted therapeutic strategies. These may include pharmacological agents, genetic modulation, lifestyle interventions, or innovative delivery systems aimed at restoring mitochondrial integrity and function. Through this Special Issue, we aim to deepen the understanding of mitochondrial involvement in neurodegenerative disease mechanisms and highlight emerging opportunities for therapeutic intervention.

Guest Editors

Dr. Rehana Khatoon
Department of Anesthesiology, University of Maryland, BA 21201, USA

Dr. Daniele Orsucci
Unit of Neurology, San Luca Hospital, 55100 Lucca, Italy

Deadline for manuscript submissions

31 December 2025

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Junji Yamauchi
1. Laboratory of Molecular Neurology, Tokyo University of Pharmacy and Life Sciences, Tokyo, Japan
2. Department of Pharmacology, National Research Institute for Child Health and Development, Tokyo, Japan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank:

JCR - Q2 (Clinical Neurology)
