Emerging Issues in Vascular Cognitive Impairment

Message from the Guest Editors

Vascular cognitive impairment (VCI) represents a heterogeneous group of cognitive disorders (varying from mild cognitive impairment, MCI, to dementia) that have a supposed vascular origin (determined by stroke). It contains the complete field of cognitive alterations greater than expected for normal aging, attributed to ischemic or hemorrhagic cerebral strokes. VCI patients that do not meet the criteria for dementia can be categorized as VCI without dementia, vascular cognitive impairment without dementia (vascular CIND), or vascular mild cognitive impairment (vascular MCI). This Special Issue of *Neurology International* (IF=3.2) includes, but is not limited to, the following topics: Cognitive disorders (including aphasias); Cerebrovascular disease (including cerebral veins and dural sinus thrombosis); Mild cognitive impairment; Vascular cognitive impairment (including vascular aphasias); Other types of dementia; Management of vascular cognitive impairment (VCI).

Guest Editors

Prof. Dr. Dragos Catalin Jianu

Prof. Dr. Dafin Fior Muresanu

Dr. Jean Claude Sadik

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Junji Yamauchi

1. Laboratory of Molecular Neurology, Tokyo University of Pharmacy and Life Sciences, Tokyo, Japan
2. Department of Pharmacology, National Research Institute for Child Health and Development, Tokyo, Japan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank:

JCR - Q2 (Clinical Neurology)
