New Insights into Movement Disorders

Message from the Guest Editor

Movement disorders are a group of nervous system conditions that affect movement. There are many types of movement disorders that cause different symptoms. Symptoms of movement disorders include the following: ataxia, chorea, dystonia, functional movement disorder, multiple system atrophy, myoclonus, Parkinson's disease, Parkinsonism, progressive supranuclear palsy, restless legs syndrome, tardive dyskinesia, tourette syndrome, tremor, etc. In order to improve the impact of movement disorders on people's lives, it is necessary for scholars to study the pathogenesis, treatment strategies, and intervention management of movement disorders. This Special Issue will collect various studies on movement disorders, especially in terms of diagnostic techniques, pathogenesis, and treatment methods.
