Biomarker Research in Neuromuscular Diseases

Message from the Guest Editor

Neuromuscular diseases include a wide range of diseases of the peripheral nervous system, including the diseases of muscles, nerves and lower motor neurons. In recent years, significant progress has been made in this field, both in diagnostic and therapeutic possibilities. There is a need for easy-to-use clinical and biochemical biomarkers to monitor disease severity, as well as to follow disease progression and for prognostic purposes. In this Special Issue, we aim to cover a broad spectrum of diseases including, but not limited to, the following: Spinal muscular atrophy; Polyneuropathies with a diverse etiology; Small-fiber neuropathy; Autoimmune myositis; Muscular dystrophies; Myopathies either of hereditary or acquired origin; In summary, we expect publications either of new research studies or overviews of clinical and biochemical investigations related to already used or new biomarkers in neuromuscular disorders.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Junji Yamauchi

1. Laboratory of Molecular Neurology, Tokyo University of Pharmacy and Life Sciences, Tokyo, Japan
2. Department of Pharmacology, National Research Institute for Child Health and Development, Tokyo, Japan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank:

JCR - Q2 (Clinical Neurology)
