

## Special Issue

# Alpha-Synuclein in Neurological Diseases

### Message from the Guest Editor

Alpha-synuclein ( $\alpha$ -synuclein) is related to the pathogenesis of several neurodegenerative diseases, including Parkinson's disease, dementia with Lewy bodies, multiple system atrophy, and other synucleinopathies. The normal function of  $\alpha$ -synuclein is associated with the regulation of neurotransmitter vesicle trafficking, thereby maintaining neuronal presynaptic activity. Altogether, a comprehensive understanding of  $\alpha$ -synuclein mechanisms and their interactions in intra- and extracellular space is important for the validation of therapeutic targets in disease initiation and progression. Hence, I look forward to receiving your contributions to this Special Issue, which aims to elucidate the pathological feature of  $\alpha$ -synuclein by integrating the current knowledge and exploring the most recent advances within the field.

---

### Guest Editor

Prof. Dr. Dong Hwan Ho

InAm Neuroscience Research Center, Sanbon Medical Center, College of Medicine, Wonkwang University, 321, Sanbon-ro, Gunpo-si 15865, Republic of Korea

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Junji Yamauchi

1. Laboratory of Molecular Neurology, Tokyo University of Pharmacy and Life Sciences, Tokyo, Japan
2. Department of Pharmacology, National Research Institute for Child Health and Development, Tokyo, Japan

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

##### Journal Rank:

JCR - Q2 (Clinical Neurology)
