

## Special Issue

# Biomarkers of Alpha-Synuclein Pathology

### Message from the Guest Editor

Alpha-synuclein (a-syn) plays a key role in the pathology of Parkinson's disease (PD), dementia with Lewy bodies (DLB), Multiple system atrophy (MSA), and other diseases. However, we are still short of biomarkers for alpha-synuclein pathology and its progression in living people. There are yet no cures for these diseases and biomarkers that can direct future therapies are urgently needed. This special issue aims to gather studies of potential biomarkers of a-syn pathology in PD, DLB, MSA, and related diseases with emphasis on diagnostic and prognostic value, and the use of non-invasive patient samples.

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid  
by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), PMC, PubMed,  
EBSCO, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 19.9 days after  
submission; acceptance to publication is undertaken in 4.7  
days (median values for papers published in this journal in  
the second half of 2024).
