

## Special Issue

# Nitrogen Management and Water-Nitrogen Interactions in Agriculture

### Message from the Guest Editor

Water and nitrogen are probably the main external resources that most contribute to crop development and yield and whose best use defines the profitability and sustainability of many irrigated agricultural systems. In irrigated agriculture, nitrogen fertilizer management practices, i.e., the forms used, the time and place of application, as well as the amounts applied, are greatly influenced by the irrigation management practices, i.e., type of irrigation, irrigation design, irrigation frequency and irrigation rates. In this Special Issue of the journal *Nitrogen*, we want to highlight the relevance of the joint management of water and nitrogen, how both factors can affect each other, and how necessary it is to integrate or consider both factors to discuss the sustainability of the agricultural system. Therefore, all those works that integrate both practices (irrigation and fertilization) for greater efficiency in the use of water and/or nitrogen will be welcome.

## About the Journal

### Message from the Editor-in-Chief

*Nitrogen*, the element that is intimately associated with essentially all processes on Earth, is the broad focus of a new online, open access journal. The intention of this publication is to offer a venue for research papers, reviews, short notes, and communications that have as a nexus this critical element.

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus, CAPus /  
SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 16.7 days after  
submission; acceptance to publication is undertaken in 3.6  
days (median values for papers published in this journal in  
the second half of 2025).

#### Journal Rank:

CiteScore - Q2 (Agricultural and Biological Sciences  
(miscellaneous))
