Palliative Care and End-of-Life Care

Message from the Guest Editor

The global demand for palliative and end-of-life care continues to rise as populations age. Many people nearing the end of their lives face challenges related to life-threatening illnesses, including but not limited to their physical, psychological, social, spiritual, and communication needs. With the early integration of the person-centered approach to palliative care, the quality of life of patients and their families can be improved. Innovative models of palliative care delivery continue to be developed globally to increase access to care for people with life-threatening illnesses. If developed and implemented well, digitally enabled models of care could strengthen progress towards a more equitable state of universal health coverage. However, it is critical to ensure digitally enabled models of care are implemented optimally to meet the needs of service users, their caregivers, and their healthcare providers. This Special Issue seeks to draw together much-needed evidence to guide the development of palliative care and end-of-life care services globally, particularly with a focus on the application of digital technologies.

About the Journal

Message from the Editor-in-Chief

Nursing Reports (ISSN 2039-4403) is an international, open access journal, addressing practice and policy issues across all fields of nursing science. We invite you to contribute original researches, review articles, essays or short reports for consideration and publication in the journal. Rapid turnaround time and full open access offer the opportunity to make research results immediately available to scientific communities and the general public.

Editor-in-Chief
