

## Special Issue

# Nursing Management in Clinical Settings

### Message from the Guest Editors

In recent decades, healthcare organizations have transformed significantly due to demographic shifts, technological advancements, and rapid knowledge growth. These innovations enhance service delivery and professional development, enabling institutions to meet modern healthcare demands effectively. Nursing management plays a crucial role in healthcare advancement by planning, coordinating, and supervising nursing activities to deliver evidence-based, patient-centered care. It aligns organizational goals with patient needs, improving both operational efficiency and care quality. Clinical nurses must maintain high care standards, ensure patient safety, and optimize workflows while fostering staff development. As leaders, managers, and educators in multidisciplinary teams, they require key competencies including leadership, communication, decision-making, and emotional intelligence. This Special Issue welcomes scientific articles, experience reports, and reviews on nursing management practices. Topics may include care quality improvement, patient safety, leadership strategies, staffing solutions, healthcare technology, evidence-based practice, and competency assessment tools.

## About the Journal

### Message from the Editor-in-Chief

*Nursing Reports* (ISSN 2039-4403) is an international, open access journal, addressing practice and policy issues across all fields of nursing science. We invite you to contribute original researches, review articles, essays or short reports for consideration and publication in the journal. Rapid turnaround time and full open access offer the opportunity to make research results immediately available to scientific communities and the general public.
