Intercultural Nursing for Older Adults

Message from the Guest Editor

Intercultural nursing is an area of study that focuses on the cultural differences that exist between patients and healthcare professionals and how those differences can affect the quality of care that patients receive. In today's increasingly globalized and diverse society, intercultural nursing is more important than ever and this Nursing Reports Special Issue on "Intercultural nursing for older adults" will provide a platform to highlight the challenges that patients and healthcare professionals face and potential strategies to meet these challenges. Research has shown that adopting an intercultural approach to nursing can improve patients' satisfaction, trust, and adherence to treatment, leading to better health outcomes. We are particularly interested in manuscripts that examine strategies, which registered nurses can use to develop their intercultural readiness and competence in nursing for older patients from diverse cultural backgrounds. The kinds of strategy under examination include for example education and training as well as seeking out diverse clinical experiences.

About the Journal

Message from the Editor-in-Chief

Nursing Reports (ISSN 2039-4403) is an international, open access journal, addressing practice and policy issues across all fields of nursing science. We invite you to contribute original researches, review articles, essays or short reports for consideration and publication in the journal. Rapid turnaround time and full open access offer the opportunity to make research results immediately available to scientific communities and the general public.

Editor-in-Chief
