Application of Controlled Release and Targeting Strategies to Nutraceutical Ingredients and Products

Message from the Guest Editor

Scientific research on food supplements and nutraceutical products is tracking the rapid growth of the related market. Many pharma companies are orienting part of their interest toward this area of health products, focusing on the great potentiality of natural compounds and on the recent discoveries of biological and biochemical studies on herbs and other natural sources. To prompt such an alignment between market requests and scientifically sound research, in the most recent years, some delivery and targeting strategies, thus far applied to drugs and pharmaceutical compounds, have been proposed to also release, in a controlled or selective manner, natural bioactive molecules which are useful in the development of food-grade products. This Special Issue aims to collect the most recent experiences and ideas in the application of controlled release approaches, including micro- and nanoencapsulation in lipid or polymeric biomaterials, to this wide area of health research.

About the Journal

Message from the Editor-in-Chief

The contemporary world is struggling with an aging population, which necessitates the design of diets that promote “healthy aging”. In this context, nutraceuticals, health-supportive substances, are significant, remaining in the focus of scientific interests and being continuously developed worldwide. The *Nutraceuticals* journal focuses on the research and development of all fields related to these substances. All types of articles are welcome, including reviews, original papers, and short communications.

Editor-in-Chief

Department of Biological, Chemical and Pharmaceutical Sciences and Technologies, University of Palermo, 90123 Palermo, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 32.7 days after submission; acceptance to publication is undertaken in 3.2 days (median values for papers published in this journal in the first half of 2025).
